

The Operating System for India's Garment Industry

RETAILERS SaaS

Stop running a modern business on WhatsApp, PDFs, and spreadsheets. India's garment industry moves fast — your back-end operations should too. Retailers SaaS is a unified, GST-compliant SaaS platform purpose-built for manufacturers, manufacturers, D2C brands, wholesalers, and omnichannel retailers who are ready to operate with the discipline and data intelligence that serious growth demands.

What Type of Business Is This For?

Retailers SaaS is built for the realities of India's garment trade — not a generic SaaS retrofitted for apparel. Whether you manufacture in Surat or dispatch from a multi-city godown network, this platform is designed for your workflows.

Garment Manufacturers

Mid-to-large manufacturers in Surat, Tirupur, Ludhiana, and Ahmedabad selling B2B to boutiques and retailers across India. Built for high-volume SKU management and multi-buyer invoicing, invoicing.

D2C Clothing Brands

Brands processing 500+ orders per day on day on Shopify who have hit the platform's platform's backend limits — variant caps, no caps, no B2B module, broken inventory sync. sync. Retailers SaaS fills every gap.

Wholesale Distributors

B2B sellers managing hundreds of retailer accounts with credit terms (Net-30 / Net-60). Replace notebooks and WhatsApp follow-ups with a fully digital credit and payment workflow.

Omnichannel Retailers

Businesses operating both a physical store and an online storefront. Real-time stock sync ensures a sale at the counter immediately reflects a cross every channel — no overselling, ever.

Multi-Warehouse Operations

Brands managing multiple godowns or fulfilment centres across cities. Zone, rack, and bin-level tracking gives you exact visibility into where every unit sits — across every location.

Private Label Manufacturers

Brands managing their own fabric procurement and in-house production. Full Purchase Order lifecycle management — from supplier PO creation to inbound receiving and stock update.

The Business Challenges We Solve

These are not edge cases. They are the daily operational realities faced by hundreds of garment businesses across India — each one costing time, money, and growth potential.

WhatsApp & PDF Chaos

Wholesale orders placed via WhatsApp PDFs, manually re-entered into Tally by staff. Every keystroke is an opportunity for error. Orders get lost. Invoices get delayed. Payments slip through.

Shopify's 100-Variant Hard Limit

A jacket with 10 colours × 12 sizes = 120 variants. Shopify blocks this entirely without a ₹1.6 Lakh per month Plus plan — forcing brands to either cripple their catalogue or pay enterprise prices.

No GST-Compliant B2B Invoicing

Shopify cannot split IGST vs. CGST/SGST or capture the buyer's GSTIN at checkout. This causes Input Tax Credit (ITC) failures for your wholesale buyers — damaging your B2B relationships.

Inventory Blind Spots

Stock is tracked as a single flat number with no location context. Staff waste hours searching for specific items across a warehouse. Picking errors and mis-ships become routine.

Zero Procurement Visibility

No system tracks open Purchase Orders, supplier lead times, or inbound stock. Procurement decisions are reactive — you reorder only after you've already run out.

Overselling Online + Offline

A shirt sold at the store counter doesn't immediately reduce your online stock. The result: overselling, customer complaints, cancellations, and damaged brand reputation.

No AI or Data Insights

Buying decisions made on gut feel and last season's memory — leading to deadstock tying up capital and stockouts causing missed sales. No forecasting means no confidence.

Credit & Payment Chaos

Net-30 / Net-60 B2B credit tracked in notebooks or personal spreadsheets. Payment follow-up is manual, inconsistent, and often embarrassingly late — straining buyer relationships.

Fragmented Tools

Separate apps for billing, inventory, POS, and WhatsApp — with no single source of truth. Data lives in silos. Reconciliation is a weekly nightmare. Strategic decisions are made on incomplete information.

How Retailers SaaS Solves It

Every challenge has a direct, purpose-built solution — not a workaround, not a plugin, not an integration you have to maintain yourself. Here is how Retailers SaaS replaces chaos with control.

1

B2B Self-Service Portal

Replace WhatsApp order collection entirely. Your wholesale buyers log in, browse live stock with real-time availability, and place orders digitally — at any time, without calling anyone.

2

Unlimited Size × Colour Matrix

Break the Shopify 100-variant ceiling with no caps on size-colour combinations. Your full catalogue — synced automatically to Shopify in real time via webhooks.

3

GST-Compliant Invoicing, Automatic

Every B2B invoice auto-captures GSTIN, assigns HSN codes, and splits IGST / CGST / SGST based on buyer state. Your wholesale buyers get clean ITC-compliant documentation every time.

4

Bin-Level Warehouse Management

Track every item to the exact Zone → Rack → Bin. Eliminate searching. Reduce pick errors. Run stocktakes faster. Know exactly where everything is — across every warehouse location.

5

Full Purchase Order Lifecycle

Create POs, track suppliers, set expected delivery dates, receive goods against open orders, and automatically update stock on receipt. Procurement becomes proactive, not reactive.

Real-Time Oversell Prevention

Bi-directional sync to Shopify and WooCommerce via webhooks and background jobs. In-store sales and online sales both draw from the same live inventory pool — instantly.

AI Demand Forecasting

30 / 60 / 90-day SKU-level demand predictions powered by Facebook Prophet and LSTM. Seasonal patterns detected. Reorder recommendations generated automatically.

Credit & Payment Workflow

Native Draft → Quotation → Invoice → Payment workflow with due date tracking, outstanding balance dashboards, and automated follow-up — replacing notebooks entirely.

One Platform, One Source of Truth

Replace 4 fragmented tools — billing, inventory, POS, and WhatsApp — with a single unified platform. Every decision made from one consistent, accurate dataset.

Key Features

Retailers SaaS is not a feature list — it is an integrated operating system. Every module is purpose-built for garment operations and works seamlessly with every other module on the platform.

Product & Variant Management

Unlimited Size × Colour matrix, automated SKU generation, barcode assignment, and multi-image support per variant. No catalogue compromise.

Order Management

B2C and B2B orders, real-time status tracking, fulfilment workflows, and bulk operations — all in a single unified order dashboard.

Point of Sale (POS)

In-store billing, barcode scan checkout, receipt printing, shift management, and individual cashier accounts — all synced to live inventory in real time.

GST Invoicing & Compliance

GSTIN capture, HSN code assignment, automatic IGST/CGST/SGST split, and full GST tax reports — every invoice is ITC-compliant from day one.

AI Demand Forecasting

ML-based 30/60/90-day predictions using Facebook Prophet and LSTM neural networks. Seasonal patterns detected automatically. Reorder points set with confidence.

WhatsApp Integration

Automated order confirmations, dispatch alerts, and B2B order collection via WhatsApp bot — meeting your buyers exactly where they already communicate.

Multi-Warehouse WMS

Zone, rack, and bin-level tracking across multiple locations. Stock transfers, inventory adjustments, and full stocktake workflows built in.

B2B Wholesale Portal

Retailer login, live stock visibility, bulk order placement, and custom pricing tiers per buyer account. Self-service that scales without adding headcount.

Procurement & Purchase Orders

Supplier management, PO creation, inbound goods receiving, and lead time tracking. Know what is coming, from whom, and when.

Analytics & Reporting

Sales trends, top-performing SKUs, revenue by channel, warehouse throughput, and margin analysis. Data-driven decisions replace gut-feel buying.

AI Inventory Bot

Ask in plain language: "How many black shirts do I have in Surat?" — get an instant, accurate answer. No reports to run, no filters to apply.

Shopify / WooCommerce Sync

Real-time bidirectional sync via webhooks — online orders flow in, inventory updates flow out. Overselling becomes technically impossible.

How It Works With What You Already Have

Retailers SaaS is not asking you to rip and replace your existing setup. It is designed to integrate seamlessly into your current technology stack — occupying the critical operational gap that neither Shopify nor Tally was ever built to fill.

Your Shopify Store

Continues to handle your customer-facing storefront exactly as it does today. Product pages, checkout, payment gateway, and customer experience remain unchanged. Retailers SaaS syncs inventory and orders in real time via bidirectional webhooks — your Shopify store always reflects accurate stock without any manual intervention.

Retailers SaaS — The Middle Layer

Runs everything your Shopify store and Tally were never designed to handle: inventory and WMS, B2B wholesale portal, POS, procurement and purchase orders, GST-compliant invoicing, AI forecasting, analytics, and WhatsApp integration. This is your operational command centre — the single source of truth for the entire business.

Your CA's Tally

Continues to handle GST filings, ledger accounting, and statutory compliance exactly as your Chartered Accountant prefers. Retailers SaaS generates the GST-compliant invoices and tax data — your CA works with clean, structured records rather than manually compiled spreadsheets.

You keep your storefront. You keep your Tally. Retailers SaaS fills the critical gap in between — handling everything that was previously managed through previously managed through WhatsApp, spreadsheets, and fragmented tools.

How We Compare to the Alternatives

Before investing in any platform, it is worth understanding exactly where Retailers SaaS stands relative to the tools you may already be using — or considering. The differences are not marginal.

vs Shopify / WooCommerce

Variant Limit: Shopify enforces a hard 100-variant cap. Retailers SaaS has no limit — no limit — sell every size-colour combination without compromise.

B2B Portal: Shopify has no native B2B wholesale portal. Ours is built in from day one, with buyer login, live stock, and custom pricing.

Warehouse Management: Shopify has no bin-level WMS. We track down to the exact the exact zone, rack, and bin across every location.

GST Compliance: Shopify cannot split IGST/CGST/SGST or capture buyer GSTIN. Our invoicing is fully ITC-compliant.

Cost: Shopify Plus costs ₹1,60,000/month. Our Pro plan is ₹2,999/month — with AI forecasting included.

vs Tally / Busy / Marg

Deployment: Tally is desktop-only software. Retailers SaaS is 100% cloud — access from anywhere, on any device, at any time.

E-Commerce Sync: Tally has no e-commerce integration. We sync with Shopify and Shopify and WooCommerce in real time.

B2B & POS: Tally has no B2B portal and no mobile POS. We have both — built in and production-ready.

AI & Analytics: Tally has no AI forecasting or analytics module. We have demand prediction, SKU analysis, and channel-wise reporting.

vs Unicommerce / Increff / Vinculum

Target Market: They target large enterprise clients (₹500+ Crore revenue). We are built for India's mid-market garment businesses (₹5–100 Crore).

Implementation Time: Enterprise WMS implementations take 3–6 months. Retailers SaaS goes live in days.

Cost: Enterprise WMS pricing ranges from ₹15,000 to ₹1,00,000+ per month. Our Pro Our Pro plan is ₹2,999/month.

Specialisation: They are generic WMS tools adapted for multiple industries. We are purpose-built, exclusively for garments.

Pricing That Scales With Your Business

Three plans designed to match your current scale — with no setup fee, no lock-in contract, and the freedom to cancel at any time. Every plan includes a 14-day free trial, no credit card required.

FREE

₹0 / month

The perfect starting point to explore the platform with zero financial commitment.

- 50 orders per month
- 100 products
- 2 users
- Point of Sale included
- 14-day free trial

STARTER

₹999 / month

For growing businesses that need full inventory control, GST compliance, and multi-location visibility.

- 500 orders per month
- 1,000 products
- 10 users
- Full Inventory Management

- WhatsApp Bot Integration
- Shopify & WooCommerce Sync
- Priority support & onboarding call
- 14-day free trial

No setup fee. No lock-in. Cancel anytime. Every plan includes a 14-day free trial — experience the full platform before committing a single rupee.

Return on Investment

The financial case for Retailers SaaS is not abstract. These are conservative, measurable outcomes that mid-size garment manufacturers and D2C brands consistently achieve within the first 6 months of going live.

80%

Faster B2B Processing

B2B order processing time reduced by 80% — the self-service portal replaces WhatsApp-to-Tally manual entry entirely.

10×

More Wholesale Accounts

Manage 10× more wholesale buyer accounts without adding headcount — the portal is self-service by design.

30%

Fewer Stockouts

20–30% reduction in stockouts driven by AI demand forecasting — procurement becomes proactive, not reactive.

25%

Less Deadstock

15–25% reduction in deadstock through data-driven buying decisions — capital is no longer is no longer locked in slow-moving inventory.

Shopify Plus Savings

Avoid spending ₹15–20 Lakhs per year on a Shopify Plus subscription just to unlock unlimited variants. Retailers SaaS removes that constraint entirely at ₹2,999/month — delivering the same capability at a fraction of the cost.

Payback Period: 3 to 6 Months

A mid-size garment manufacturer or D2C brand doing ₹5–50 Crore in annual revenue can conservatively expect **₹15–30 Lakhs in annual savings from day one** — **one** — through reduced platform costs, lower deadstock, faster collections, and and eliminated operational inefficiencies.

At ₹2,999/month (₹35,988/year), the platform pays for itself many times over within the first operational quarter.

Get Started Today

Every day you run your operations on WhatsApp, PDFs, and spreadsheets is a day of avoidable errors, missed orders, and lost revenue. The switch to Retailers SaaS switch to Retailers SaaS takes days — not months — and works seamlessly alongside your existing Shopify store and Tally setup.

14-Day Free Trial

No credit card required. Explore the full platform — every feature, every module — for — for 14 days at zero cost and zero commitment. Experience the difference before before spending a rupee.

Onboarding Call Included

Every Pro plan includes a dedicated onboarding onboarding call with our team. We help you you configure your warehouse, import your your products, and connect your Shopify store store — so you go live fast and confident.

Works With Your Existing Stack

Keep your Shopify storefront. Keep your Tally setup. Retailers SaaS installs in the middle — filling the operational gap without disrupting what already works for your business.

WhatsApp us directly at 919910143234. Our team typically responds within the hour during business hours.

No setup fee. No lock-in. Cancel anytime. **India's garment industry deserves an operating system built for it — and now it has one.**
